

A desktop learning layer for understanding, verifying, and retaining the code AI helps create.

unvibe

Good morning.

Review a change

1. COMPANY OVERVIEW

Unvibe was founded May 16, 2026 to help people make AI-written code their own. The product turns code changes into contextual explanations, comprehension checks, and saved learning - inside the workflow where the work happens.

Why did this change?

The function now refreshes a session before continuing.

2. PROBLEM

- AI can create software faster than people can absorb its reasoning.
- Generic explanations lack the project context that makes a change meaningful.
- Users still need to review, debug, explain, and maintain what ships.

src/auth/session.ts

```
12  const session = await
13  if (!session) signOut();
```

EXPLAINS THE WHY

3. PRODUCT

- Select a line, file, or change.
- Choose an explanation depth from New through Expert.
- Get a context-aware explanation and one lightweight check.
- Save useful explanations, concepts, snippets, and review history.

students builders founders

4. WHO IT HELPS

- Students learning through active projects
- AI-assisted builders working with agents
- Hackathon teams and early founders
- Future teams needing shared project understanding

5. BUSINESS MODEL + FUNDING CASE

- Free: a complete first learning loop.
- Pro planned: \$8/month or \$6/month billed annually for deeper project context and study tools.
- Teams planned: shared workspace and team knowledge.
- Funding case: prove repeat use, learning value, trust, and retention with a focused Mac beta cohort.

6. CURRENT STATUS + NEXT PROOF

Unvibe is a macOS private beta product. The immediate goal is a reliable onboarding and explanation loop, then evidence of activation, repeat use, saved learning, and privacy trust. Those facts - not unverified claims - create the basis for pre-seed conversations.
