

unvibe

PRIVATE BETA / INVESTOR DECK

Make the code yours, *not just AI's.*

Unvibe is a desktop learning layer for people building
with AI coding tools.

THE NEW

**AI writes code
faster than
people can
absorb it.**

SELECT

UNDERSTAND

RETAIN

AI accelerates building.

Responsibility does not disappear.

The difficult moment is not generating a change. It is deciding whether you understand it well enough to own it.

01

More code arrives

Agents can change a line, a file, or an entire flow in minutes.

02

Context gets lost

A generic chat response rarely knows why the code exists in this project.

03

The user still owns it

Someone must review, debug, explain, and maintain what ships.

One quiet loop.

Inside the workflow.

01

Select

A line, file, or change

02

Explain

At the right depth

03

Check

A single comprehension
prompt

04

Save

The context worth
remembering

Unvibe is not another code generator. It is the learning layer around the code already being generated.

The right explanation *starts with the right context.*

src/auth/session.ts

```
12  const session = await refreshToken(user);  
13  if (!session) return signOut();
```

INTERMEDIATE

Refreshes an expired session
before the user continues.

- **Project-aware**

Selected code plus the context that gives it meaning.

- **Depth-aware**

New through Expert, rather than one generic answer.

- **Memory-aware**

Useful explanations become a personal review trail.

Start with people who are *building faster than they understand.*

Students

Make active projects the learning material.

AI-assisted builders

Understand what an agent changed before the next change arrives.

Hackathon teams + founders

Keep architecture and ownership clear while moving quickly.

The business model follows *the depth of the workflow.*

FREE

\$0

Core overlay + saved learning

A complete first learning loop.

PRO

\$8 / month

Deeper project context + study

\$6 / month billed annually.

TEAMS

Planned

Shared workspace + team
knowledge

Pricing and availability to validate.

A focused path *to product proof.*

The current goal is simple: earn repeat use and trust from people using Unvibe to understand their own work.

- NOW** A Mac private beta with selected-code explanations and learning capture.
- NEXT** Validate repeat use, learning value, privacy expectations, and paid expansion.
- ASK** Meet people who care about AI-native developer ownership and learning.
