

Understand the code

AI ships for you.

Unvibe sits beside your editor, explains what the AI just wrote, checks you actually got it, and keeps the lesson. Free on Mac and Windows.

Live today**v0.1.27****Mac + Windows***hi! I'm Vibe*

I shipped code

I couldn't explain.

I'm Preston. I'm 17, I grew up in Jakarta, went to school in Perth, and now study EECS at Diablo Valley College in California. I build with Cursor and Claude every day on one MacBook, no GPU, no budget.

The AI made me fast. It didn't make me understand. So I built the tool I wanted: one key, and the code makes sense, at my level.

Preston Susanto

- 4.0 GPA, EECS at DVC, Phillip Howe Scholarship
- SF Hacks 2026: 3 awards in one weekend
- Mega Hackathon: Gaming Award, solo, 950+ entrants
- Software Engineer Officer, Google Developers Group
- Built and shipped Unvibe solo: app, API, site
- English, Indonesian and Mandarin

AI writes the code now. *Who understands it?*

84%

of developers use or
plan to use AI tools

51%

of professional
developers use AI every
day

3%

highly trust the
accuracy of what AI
writes

45%

say debugging AI code
takes longer than writing
it

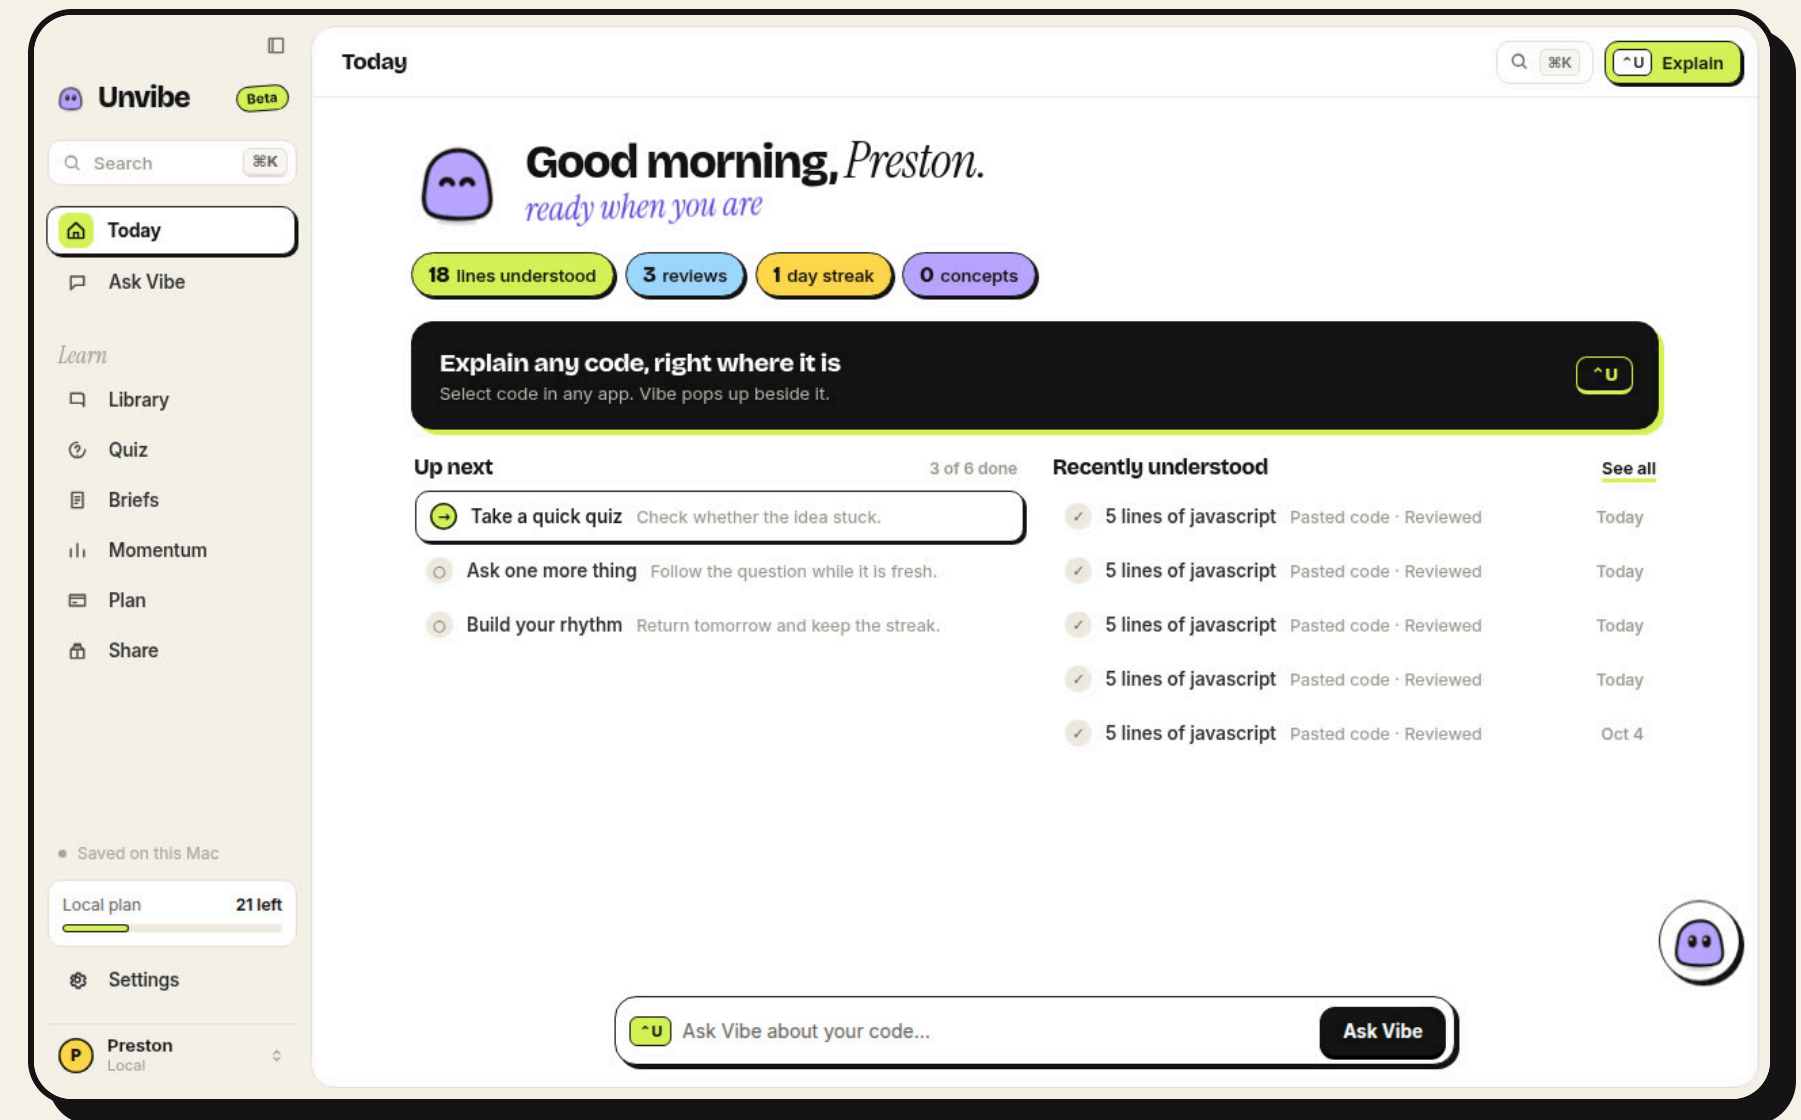

Generation is solved. Ownership is the new gap.

Source: Stack Overflow 2025 Developer Survey, 49,000+ developers

Select. Press ⌘U. Get it.

- 1 Select any code, in any app
- 2 Explain at 5 depths, New to Expert
- 3 Test me: one question to prove it stuck
- 4 Save the lesson to your library

Works beside Cursor, VS Code, Claude Code and Terminal. Model access included, no API key.

Now on v0.1.27. *Here's what's new.*

After-Agent Review

When Cursor or Claude Code edits many files, Unvibe ranks the real diff and gives a review checklist.

Windows

Mac and Windows from one codebase. The site always serves the newest version.

Knowledge freshness

Saved explanations get flagged when the code under them changes.

A talking onboarding

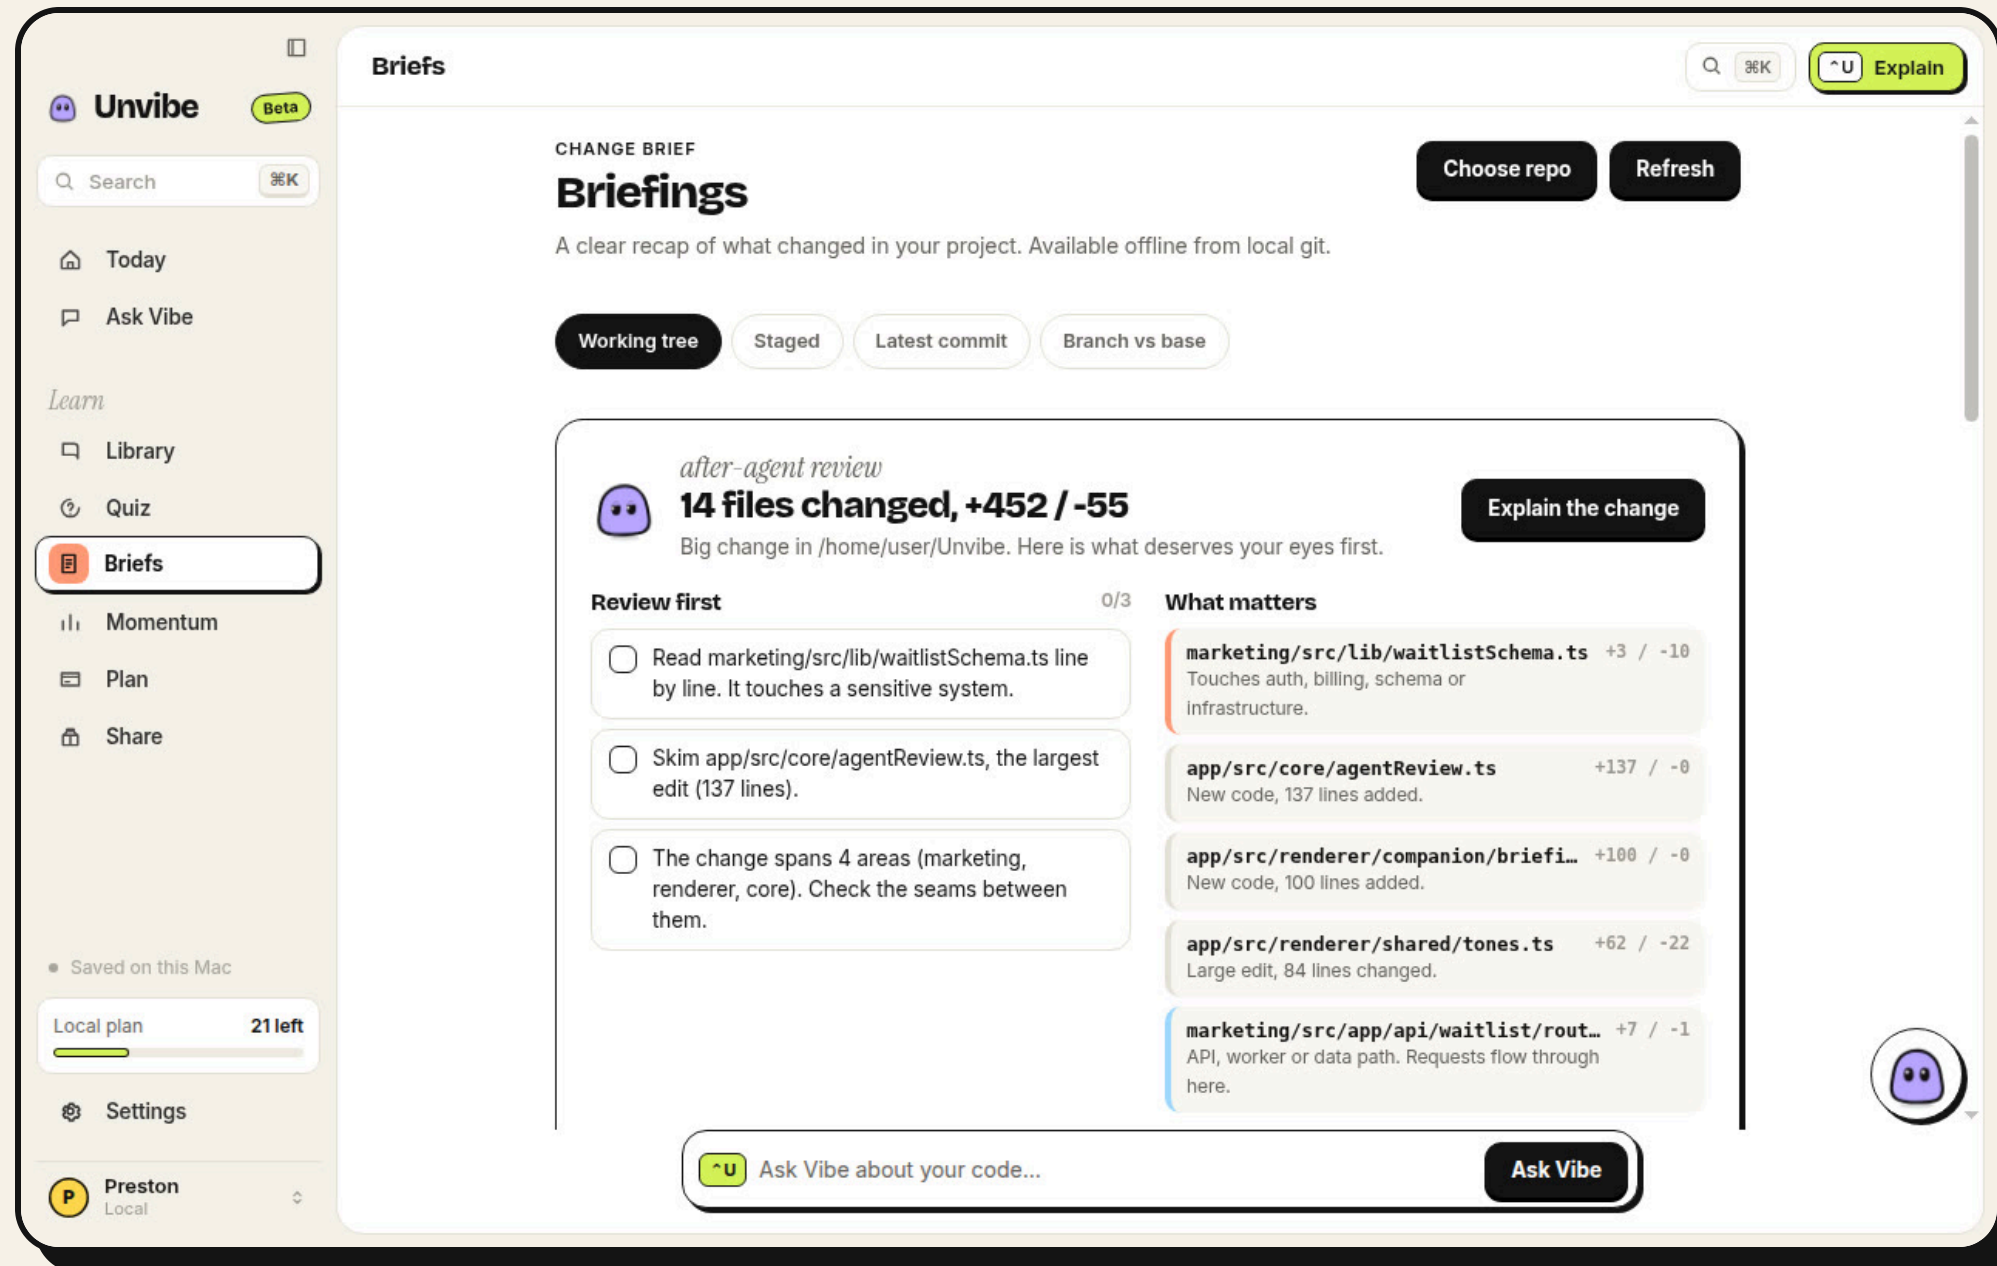

Vibe talks you through setup with sound, Google fills in your details, a 6 second demo.

Try it in the browser

Paste code on unvibe.site and get a real explanation before installing.

Growth loops

Invite a friend: both get a month of Pro. Feedback earns a month. Welcome emails.

Your agent changed 14 files. Which 3 matter?

After-Agent Review reads the diff, ranks what actually matters, groups it by area, and hands you a checklist. Tick it off and Vibe celebrates.

Your code stays *yours*.

Filtered locally

API keys, tokens and .env files are removed on your computer before anything is sent.

Server never reads the repo

It only receives the already filtered context you chose to explain.

No training

Private code is never used to train models. Per repo consent, delete anytime.

Live, free, *and moving.*

Built and shipped solo. Early numbers, all real, and every one is tracked live.

\$267,700

in startup support.

From 13 sources, including Claude for Startups and 10 other startup programs. Mostly product credits that cover analytics, AI and hosting for years. Credits are not cash, and this is not a priced round.

Mixpanel for Startups	\$144,000
Claude for Startups	\$21,500
PostHog for Startups	\$50,000
GitLab for Startups	\$23,700
Salesforce Launchpad	\$13,500
AWS for Startups	\$5,000
Linear Founder Value Pack	\$4,500
Google AI Startups	\$2,000
OpenAI · Deepgram · MongoDB	\$2,700
Founder capital + early angel	\$800

Free builds the habit. *Pro pays.*

Free

\$0

- 50 explanations a month
- Five depths, Test me
- Saved lessons

Pro

\$9_{/mo}

- \$81 a year
- Git diffs and agent reviews
- 10 projects, full history

Teams

\$8_{/seat}

- 2 to 20 seats
- Shared knowledge (next)
- Enterprise above 20

Every new account starts with a free month of Pro, and invites add more. Users feel Pro before they pay for it.

Not another generator. *The layer that sticks.*

Who	What they do	What's missing
Coding agents	Generate and edit code	Not built to make you understand it
Chatbots	Explain pasted code in a side window	No editor context, no memory, no check
Courses	Teach a fixed curriculum	Not the code you actually ship
Unvibe	Explains your code in place, at your level	Checks you got it and keeps it fresh

Neutral across every agent. The more you build, the more Unvibe knows what you know.

Start where the gap *hurts most*.

Students and clubs

GDG, Code The Change and campus CS clubs I already help lead. Workshops, not ads.

Hackathons

Teams ship in 48 hours and have to demo it. I've won there, so I know the room.

AI coding communities

Cursor and Claude Code builders, build in public clips, product directories.

Built-in loops: invite a friend for a free month, feedback for a free month, try it in the browser before installing.

From explaining code *to owning a codebase.*

Shipped

- Explain at 5 depths, Test me
- After-Agent Review
- Knowledge freshness
- Mac + Windows

Next

- Instant Selection Bubble
- Ask the codebase
- Impact trace: what breaks

After that

- GitHub PR intelligence
- Shared team knowledge
- Who knows this code

Help me make AI code *understandable.*

CAPITAL

**\$50K to
\$100K**

AI usage, Apple and
Windows signing, security
review, focused
distribution.

USERS

**500
builders**

Students, AI first devs and
hackathon teams using it
on real work.
