

UNVIBE

THE COMPREHENSION LAYER FOR AI-WRITTEN CODE

Unvibe makes AI-written code understandable.

A Mac-first product that turns every AI-generated change into understanding, verification, and retained project knowledge.

SELECT → EXPLAIN → ASK → TEST → SAVE

Preston Susanto · Founder

Private beta · August 2026

The faster AI ships code, the harder ownership becomes.

The bottleneck moved from generating code to verifying, explaining, and remembering what shipped.

84%

use or plan to use AI in
development

66%

say AI answers are almost right

45%

spend longer debugging AI code

3%

highly trust AI output

Generation is solved. Ownership is not.

That gap becomes a learning, reliability, and
governance problem.

Review the change. Learn it before it ships.

Highlight code in Cursor or VS Code, press ⌘U, and get a contextual explanation without leaving the project.

LOCAL SECRET FILTER BEFORE EVERY REMOTE REQUEST

One layer. Three moments of value.

Review the change now. Revisit it later. Prove you retained it.

UNDERSTAND

RETAIN

PROVE

Generation creates output. Unvibe creates ownership.

Coding agents

Generate and edit code

Do not build learning memory

Generic chat

Explain pasted snippets

Misses workflow and project context

Course platforms

Teach fixed curricula

Disconnected from what shipped

Unvibe

Explains your selected change

Tests, saves, and tracks ownership

WORKFLOW CONTEXT + ACTIVE RECALL + RETENTION

Small launch. Real signal.

“The test option is very useful to recap what was learnt.”

Sharice Gustian · private beta · 9/10

“The explanation depth and customization felt genuinely creative.”

Om Anand Khaunte · private beta · 7/10

*Founder-reported across the pre-reset waitlist and early beta intake; current live store is tracked separately.

Start where AI speed creates the sharpest pain.

01

AI-first students

Ship quickly, learn unevenly

02

Solo builders

Own every line they deploy

03

Developer teams

Need shared comprehension

04

Regulated teams

Need evidence and review

The recurring unit is a review, not a course. The expansion path follows code responsibility from individual learning to team assurance.

Free to build the habit. Paid when the project grows.

FREE	PRO	TEAM	ENTERPRISE
\$0	\$8/mo	\$8/seat	Custom
Core selected-code review Saved learning + study	More reviews + AI questions Personal learning history	Shared workspace 2-seat minimum	Annual contract Integrations + support
		COMING SOON	CONTACT SALES

Annual plans discount 25%. Model access is included—no provider API key required.

Go where AI-first builders already share what they ship.

A founder-led motion that turns public building, directories, hackathons, and student communities into beta conversations.

Seven weeks from pivot to working private beta.

Selection bridge · secret filtering · streaming AI · study loop · usage meters · Google sign-in · durable waitlist

\$232.7K in startup support. Built without a priced round.

\$231.9K is program and platform credit; \$800 is founder-reported cash support. Credits are not cash and not investment proceeds.

Mixpanel	\$144K	PostHog	\$50K	GitLab	\$23.7K
AWS	\$5K	Linear	\$4.5K	Google	\$2K
OpenAI	\$1.2K	Deepgram	\$1K	MongoDB	\$500

WHAT THIS BUYS

Runway for analytics, infra, AI evaluation, and secure developer operations.

Turn a working loop into a repeatable habit.

NOW

Reliability

Notarize the Mac app. Harden capture, streaming, and offline recovery.

NEXT

Retention

Weekly review rhythm, stronger concepts, personal notes, visual learning aids.

THEN

Distribution

Open VSX extension, beta communities, referrals, and first paid teams.

\$50K–\$100K PRE-SEED / ACCELERATOR SUPPORT

Also seeking introductions to AI-first builders, student developer communities, and design partners.

Built by someone inside the problem.

Preston Susanto is a solo technical founder building Unvibe while using AI coding tools every day—and feeling the ownership gap firsthand.

- ◆ Product, desktop, backend, and launch motion built end-to-end
- ◆ Rapid user-feedback loop with public build records
- ◆ Google Developers Group DVC founder and hackathon organizer
- ◆ Mission: make AI development understandable, verifiable, and retainable

Make AI development understandable.
